colleagues, family and friends.

Originally developed for web designers, Markdown is rapidly becoming adopted across the board as a simple, portable method of creating, editing and formatting text, with many applications starting to have native support for Markdown built in.

The short, free version of the show covers the basics of Markdown and describes and demonstrates some of the syntax used.

The full members version of the show covers this plus many more topics including:

 **DashKards** - A great way to have a Markdown crib sheet at your fingertips via Dashboard (as well as many other top Mac applications)

 **Markdown and Applications** - A look at some of the best text editors available including NValt and TextMate. This section also shows you how to add a QuickLook plugin in to OSX to view Markdown files in all their glory using QuickLook.

 **Web Publishing with Markdown** - A look at some of the most popular blogging tools and services with support for Markdown included. I also take a look at how you can add Markdown support to Rapidweaver 5 by using a Plugin.

 **MultiMarkdown** - Want to use Markdown for more complex projects or documents. MultiMarkdown will give you all you need and more. Specially extended to allow for a much richer and complete set of formatting tools and conversion utilities, MultiMarkdown enables the creation of complex, highly formatted documents for simple text files. In this section, I show and example of using MultiMarkdown file imported into Scrivener and exported to RTF format for Pages - pretty neat!

 **MultiMarkdown** - Want to use Markdown for more complex projects or documents. MultiMarkdown will give you all you need and more. Preview

Another double length show this week, packed with all sorts of information. The full, double length show is only available to ScreenCastsOnline Extra! members, the free version of the show is just the first 20 minutes or so.

This week's show has a theme but covers lots of different tools and technologies - something for everybody!

The main theme of the show is Markdown - a simple formatting language that allows you to use plain text files for all your writing on your Mac, iPad or iPhone. As it's based on pure text files, Markdown gives you complete freedom and flexibility in the way you create documents and in the way you can share them with colleagues, family and friends.

Originally developed for web designers, Markdown is rapidly becoming adopted across the board as a simple, portable method of creating, editing and formatting text, with many applications starting to have native support for Markdown built in.

Desktop, Laptop & iOS Devices

The Cloud is your friend!

Based on previous sections, most options have a
Cloud component...

...and most components have web or iOS specific
clients to access your data via iPad or iPhone

iOS apps

- Dropbox
- Simplenote
- OmniFocus
- MobileMe
- BusyToDos
- TextExpander
- 1Password
- and more
